## Introduction

This document is a user manual relating to the use of the General Frontend of the Curtin Medical Study Planner. The General Frontend has two main methods of use, the bottom up and the top down approaches, which allow the user to approach their study plan creation in a different way. The General Frontend also has a secondary functionality that allows users to view the more detailed information on a selected unit from the list of all possible units.

## How to Use the Study Planner

The General Frontend starts on the landing page which consists of three navigation cards. The three cards respectively navigate to the study planner, the view all careers and the view all units page. The landing page is shown in the image below.

Landing Page

After selecting the Plan My Medical Course navigation card, the user will see two navigation cards (see image below) representing the two approaches, bottom up and top down, that the user can take in creating their study plan.

## 2 / 7

The user will need to select one major to begin and the selected major will partially populate the user's study plan as shown by the the list on the left hand side in the image below. After selecting a major, the user will be on the main study planner page, where the user may select other majors, specializations and/or units to complete their study plan.

To switch between viewing majors, specializations and units, the drop down box located in the top left is used. When completing the study plan, the user may select majors, specializations and/or units up to a maximum number. For example, a user may select two majors or have one major and two specializations, the accepted study plan types are listed to the left of the available careers section. On reaching a full study plan, the user is presented the option to continue to the next step or return to the main menu.

Your Plan Is Now Full

You can view your available career paths on the list to the right of the screen, if you want more information you can click on the career to open a career information view. You can also click continue to move onto planning your study plan.

RETURN TO MAIN MENU

CONTINUE TO STUDY PLAN

When selecting majors, specializations and/or units, some of these may have incompatibilities, pre or co requisites and/or already be in the user study plan. In such a case, an error popup will occur indicating the reason for the error as shown in the image below.

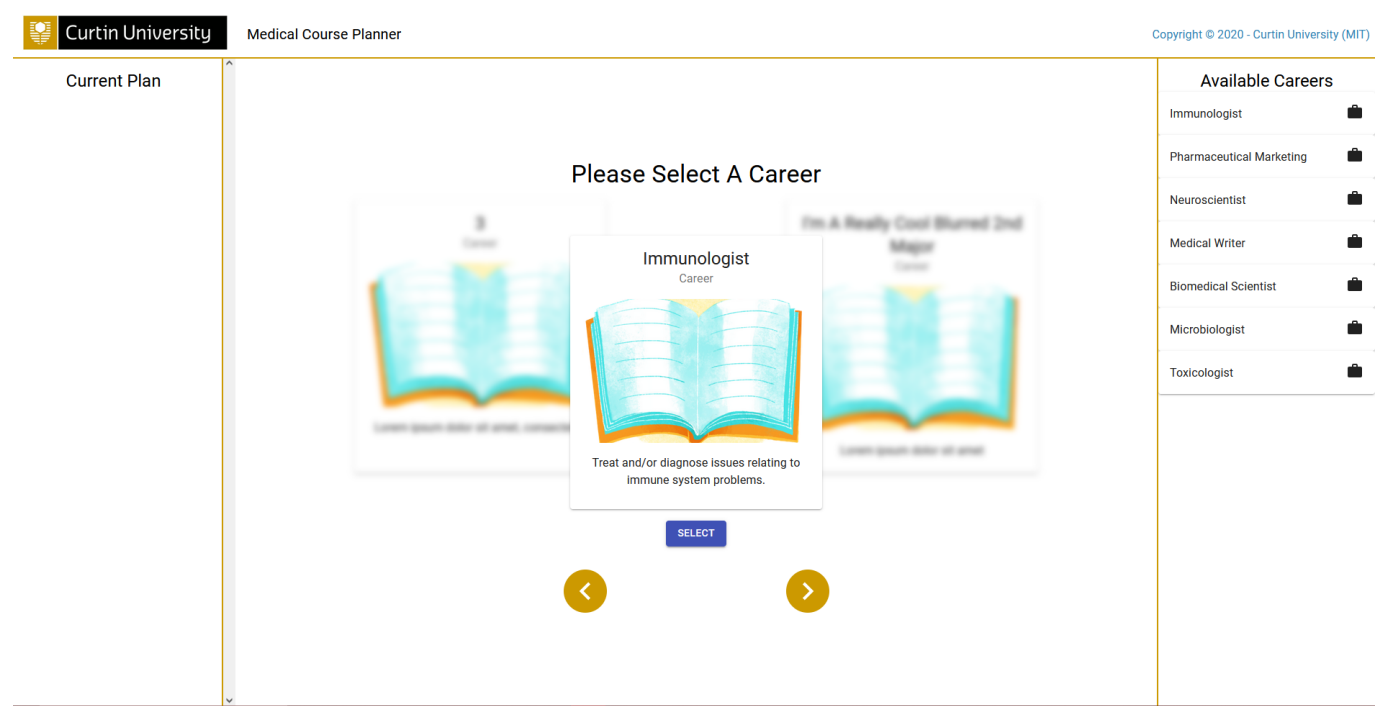

Timetable

The next step in the process is completing the timetable, where the user may plan what units to take during semester 1 and 2 of their second and third years if they have optional units. Available careers are shown in a table below the timetable with descriptions and links to more detailed information pages on click. When selecting units, an error popup will be shown should prerequisites not be satisfied.

## Top Down

The top down approach has the user choose one career from a list of careers which is then used to prepopulate their study plan with units. From here the user can then fill in the rest of their study plan with other majors, specializations and/or units.

After clicking the top down navigation card, the user will be directed to a page displaying a list of careers as shown above. The user may select a career which will allow them to see more information about it or navigate back to the list of careers. After deciding on their chosen career, the user can proceed to the next step where the system will pre-populate their study plan with the career's suggested units and then allow them to choose other majors, specializations and/or units as needed to complete their study plan.

After completing the study plan, the user can move onto the next step, which is completing the timetable or return to the main menu. On the timetable page the user may plan what units to take during semester 1 and 2 of their second and third years if they have optional units. Available careers are shown in a table below the timetable with descriptions and links to more detailed information pages on click. When selecting units, an error popup will be shown should prerequisites not be satisfied.

## ViewAll Careers

The view all careers page shows a list of all careers which when selected lead to an information page displaying the detailed information of the selected career. The list page also has a search bar to filter the careers.
